

Surendar UthamiNathan

Java Backend Engineer

surendaruthaminathan@gmail.com | +91 8189874244 | surendar.web.app

EDUCATION

ADHIYAMAAN COLLEGE OF ENGINEERING

BE IN COMPUTER SCIENCE

Grad. 2022 | First Class - 7.5 CGPA

SKILLS

Languages:

Java (8 / 11 / 17), JavaScript, SQL

Frameworks & Libraries:

Spring Boot, Spring MVC,
Spring Security, Spring Data JPA,
Spring Cloud, Hibernate,
REST APIs, OpenFeign,
Spring RestClient, Eureka
Server, Eureka Client,
Service Discovery

Databases:

MySQL, PostgreSQL, Redis

Messaging & Tools:

Apache Kafka, Maven, Git,
GitHub, Docker, Postman,
Spring Actuator, IntelliJ IDEA

Practices:

SOLID Principles,
Design Patterns (Builder, Factory,
Strategy, Singleton, Repository, Adapter),
Microservices, CI/CD,
MVC Architecture, Agile/Scrum

COURSEWORK

Data Structures & Algorithms
Azure Fundamentals AZ-900 [Link]
Software Design & Architecture
Object-Oriented Programming
Operating Systems

ACHIEVEMENTS

Leetcode

Rating **1604** | Peak rank **3,809**
350+ problems solved in Java.

EXPERIENCE

WIPRO TECHNOLOGIES | SOFTWARE ENGINEER

Jul 2023 -- Present | Bengaluru, India

- Architected and owned **4+ microservices** within a **BFSI transaction platform** using **Spring Boot** and **Spring Cloud**; registered services with **Eureka Server** for dynamic discovery, replacing hardcoded URLs with **Eureka Client**-resolved **OpenFeign** and **Spring RestClient** calls.
- Designed and delivered **5+ scalable RESTful APIs** using **Spring Data JPA**, **Hibernate**, **MySQL**, and **PostgreSQL**, powering high-volume banking workflows serving thousands of daily transactions.
- Introduced **Apache Kafka** as the platform's event backbone, building producers and consumers for asynchronous, near real-time business event processing across services.
- Diagnosed and resolved **N+1 query bottlenecks** using **JPA fetch joins**, **DTO projections**, and **Spring Data JPA Pageable**-based pagination, cutting API response latency by **~57%** on high-traffic endpoints.
- Containerized services with **Docker**, drove **Low-Level Design** discussions and code reviews within Agile sprints, directly shaping architecture decisions ahead of implementation.

WIPRO TECHNOLOGIES | ASSOCIATE SOFTWARE ENGINEER

Apr 2022 -- Jun 2023 | Bengaluru, India

- Built **REST endpoints** for customer and billing workflows using **Spring Boot**, adding request-level validation to catch malformed data before it reached downstream services.
- Integrated **JWT authentication** and **Role-Based Access Control (RBAC)** using Spring Security, restricting sensitive customer and billing data to authorized roles only.
- Refined **Hibernate entity mappings** and rewrote inefficient HQL queries, improving query execution speed by **~25%** and lowering memory footprint under high-volume transaction load.
- Authored **API and schema documentation** for the team's core services, cutting new-developer onboarding time and reducing repeat questions during handoffs.
- Provided **production support** and resolved critical bugs in customer-facing billing modules, reducing recurring incident tickets and improving system stability.

PROJECTS

RATE LIMITER SERVICE | JAVA 17

- Implemented all **5 industry-standard algorithms** (Token Bucket, Leaky Bucket, Fixed Window, Sliding Window Log, Sliding Window Counter) behind a single **RateLimiter interface**, selectable at runtime via **Factory pattern**; verified **zero token double-spend** under a 20-thread **CountDownLatch** concurrent stress test.
- Applied **Builder**, **Factory**, and **Strategy** patterns with an immutable **RateLimiterConfig** and **RateLimitResult** object; architected **multi-profile RateLimiterService** with independent per-endpoint limits and config hot-reload.
